Grocery Shopping Price Book

Save your receipts and then enter the prices of the items you buy. You may also want to copy prices out of store ads and add "normal" off-sale prices for reference. Make sure to note the date and whether the item was on sale (for instance, make a star in this column). Even if it is a pain, always calculate the unit price! This is very important, since groceries can be packaged in an array of sizes. The unit price is the only way you can measure them all up and see what is really a value, and what is just a trick.
